“I have to thank all of you from the bottom of our hearts. If it were not for this program my daughter could still be suffering and possibly develop long term loss.”

-Mary, Madeline's mom

Madeline was screened at 2 years of age by the BASICS Program. She failed her hearing initially and in the subsequent rescreen. She was then seen by an ENT who recommended her having her tonsils and adenoids removed. Mary, Madeline's mother, has noted significant differences in Madeline's quality of life as her speech has improved and she no longer suffers from sleep apnea.
