*"I'm so thankful Daniel was screened at school.  
We would have never known he had hearing  
issues"*

*-Paula, Daniel's mom*

---

Daniel is a 15 month old boy with speech and language delays. At the time of our BASICS hearing screen, which he failed, he had only 5 words. Daniel was referred to an ENT and had surgery for the placement of pressure equalization tubes and adenoid removal. Thanks to the commitment of Daniel's mom, Paula, he received the services and treatment that he needed.

Paula, Daniel's mom said, "If you are concerned, don't wait. Follow your instincts and get a second opinion even if your pediatrician says not to worry yet. Daniel can hear so much better now and his speech has drastically improved."
